

SOC 4650/5650: Lab-11 - Building Out Your StoryMap

Christopher Prener, Ph.D.

Spring 2021

Directions

Using data accessed from the module-4-arcgis-online repository and the maps you created for Lab-09, continue to build out your experimental ArcGIS StoryMap. You will also need to download images contained in the module-4-storymap-2 repository. A link to your StoryMap should be added to an issue in your GitHub assignments repository by **Monday, April 18th** at 4:15pm. Make sure it is published so that Chris can view it!

Part 1: Labels and Pop-ups

Customize your two maps related to Missouri in 1830, created initially as part of Lab-09. Your reference map should include labels and no pop-up. Your 1830 Decennial Census map should include pop-ups with both the state/territory names as well as the population in 1830.

Part 2: Updating the Design

Once you have updated your labels and pop-ups on your map, make the following changes to the design of your StoryMap:

1. Choose a stock theme other than the Summit theme that we have been using.
2. Modify the cover image using the cover-image.jpg file found in the data/lab-11 folder in the module-4-storymap-2 repository. This map from the [Library of Congress](#) was created in 1814 by cartographer Mathew Carey and shows the boundaries of the Louisiana Purchase.
3. Below your maps from the 1830 Census, add a new heading called "Growing St. Louis." Add the st-louis.jpg file found in the data/lab-11 folder in the module-4-storymap-2 repository. This picture from the [Library of Congress](#) shows St. Louis in 1873, a year before the [Eads Bridge](#) was fully completed.

4. Below the picture from 1873, add [this video from the Missouri Historical Society](#) about the [Eads Bridge](#). The Bridge was the first bridge completed over the Mississippi River south of the confluence of the Missouri and Mississippi rivers. It is also the oldest remaining bridge over the Mississippi River in use today.
